The EZ GRIP® Joint Restraint is a proven design, offering an efficient, reliable, and inexpensive method of restraining PVC Pipe with Mechanical Joint Pipe or appurtenances, by integrating a series of gripping wedges into a Mechanical Joint follower gland.

**ADVANTAGES, BENEFITS, FEATURES**

- The EZ GRIP® Joint Restraint eliminates clamps, tie rods, cables, and thrust blocks.
- The EZ GRIP® Joint Restraint performs optimally with all mechanical joint sockets of the ANSI/AWWA C111/A21.11, C110/A21.10, and C153/121.53 Standards and may be used with 4” - 12” AWWA C900 (PVC), C905 (PVC), C906 (HDPE)*, C909 (PVCO) or 3”-12” ASTM D2241 IPS PVC Pipe.
- The EZ GRIP® Joint Restraint will allow joint deflection, and maintain the seal and restraint while under pressure, and while subjected to ground movements.
- The EZ GRIP® Joint Restraint shall have a pressure rating equal to that of the PVC pipe and shall have a minimum safety factor of at least 2 to 1.
- The contoured wedges provide greater circumferential contact with the pipe wall and increase the grip as the hydrostatic pressure increases.
- The hex head of the actuating screw is the same size as a standard T-bolt nut (1¼”), and requires no tool other than the tool required to install a standard Mechanical Joint T-Bolt and Nut.
- The hex head of the torque control screw is designed to shear at a preset limit, assuring proper installation and to prevent damage to the PVC pipe.
- When the actuating screw is rotated in the correct direction (clockwise) the torque control head breaks off, exposing a 5/8” hex head, indicating proper deployment of the wedge.
- After removing the 1-1/4” torque control hex head, a 5/8” hex head remains for multiple disassembly and re-installation, if necessary.
- EZ GRIP® Joint Restraints offers 5° deflection up to sizes 12”, 3° on 14”-24”, 2° on 30”-36”
- The gland, wedges, and screws are manufactured from high strength Ductile Iron in compliance with the ASTM A536 Standard, Grade 65-45-12.
- The EZ GRIP® Joint Restraint is designed to perform optimally for potable and recycled water, and for wastewater applications.
- The EZ GRIP® Joint Restraint for PVC Pipe is provided with a coating that is compatible with most field applied coatings.
- The standard color for the EZ GRIP® for PVC Pipe is red.
- Approved by Factory Mutual (FM) for sizes 4”-12” at 250psi for AWWA C900 Class 305 DR-14 pipe and at 200psi on AWWA C900 Class 235 DR-18 pipe. Listed with Underwriters Laboratories (UL) for sizes 4”-12” at 235psi on AWWA C900 Class 235 DR-18 pipe. Tested and approved for ASTM F1674 standard by UL.

* AWWA C906 HDPE Pressure Pipes up to 12” by using internal pipe stiffeners. Contact SIP for further assistance.
Installation Procedure

Installation Procedure for restraining mechanical joint appurtenances on PVC pipe

1. Establish the type and diameter of the PVC pipe. If the PVC pipe is AWWA C900, C905, or C909 then the spacer/washers on the actuating screws should remain. If the PVC pipe is IPS (Steel OD) then the spacer/washers should be removed and a Transition Gasket is required for proper sealing.

2. Clean the socket and the plain end. Lubrication and additional cleaning should be provided by brushing both the gasket and the plain end with soapy water or an approved pipe lubrication meeting the requirement of ANSI/AWWA C111/A21.11, just prior to slipping the gasket onto the plain end for joint assembly. Place the gland on the plain end with lip extension toward the plain end, followed by the gasket. NOTE: In cold weather it is preferable to warm the gasket to facilitate assembly of the joint.

3. Insert the pipe into the socket and press the gasket firmly and evenly into the gasket recess. Keep the joint straight during assembly.

4. Push the gland toward the socket and center it around the pipe with the gland lip against the gasket. Insert bolts and hand tighten nuts. Make deflection after joint assembly but before tightening bolts.

5. Tighten the bolts to the normal range of torque as per AWWA C600 (see table below), while at all times maintaining approximately the same distance between the gland and the face of the flange at all points around the socket. This can be accomplished by partially tightening the bottom bolt first, then top bolt, next the bolts at either side, finally the remaining bolts. Repeat the process until all bolts are within the appropriate range of torque. The use of a torque-indicating wrench will facilitate this procedure. Over-tightening T-Head Bolts can damage the PVC pipe. Do not overtighten the T-Head Bolts

6. Tighten the torque control hex heads clockwise until all the wedges are in firm contact with the pipe wall. Tighten a torque control hex head ½ turn, and then continue tightening each torque control hex head 180° opposite the previously tightened hex head until all torque control hex heads have been twisted off.

If it is necessary to disassemble, a 5/8” hex head is provided on the wedge screws. For re-installation, first confirm that all wedges are in their sockets, and then follow the installation instructions, using a torque indicating wrench to tighten the 5/8” hex head to 70 ft-lbs for sizes 3”-12”, 80 ft-lbs for sizes 14”-24” and to 90 ft-lbs for sizes 30”-36”.

The mechanical joint restraining mechanism and the follower gland shall be designed and manufactured as one integral device providing for a joint seal and performing as a joint restraint. The mechanical joint restraint shall be compatible with AWWA C900, C905, C906, C909 and ASTM D2241 PVC Pipe and shall be achieved by a series of individually activated, contoured wedges gripping the outside wall of the PVC Pipe. The mechanical joint restraint shall have the same pressure rating as the pipe with a 2:1 safety factor. The grip of the wedges shall increase as the hydrostatic pressure increases.

There shall be no additional tool required for installation other than the tool required to install a standard Mechanical Joint T-Bolt and 1-1/4" Nut. The hex head of the actuating screw shall be designed to break off at a preset torque, and only by tightening clockwise. After the removal of the 1-1/4" torque control hex head, a 5/8" hex head on the actuating screw shall remain, to allow for the disassembly and re-installation of the gland and restraint, if necessary.

The gland, screws, and wedges shall be manufactured of high strength ductile iron in accordance with the ASTM A536 Standard, Grade 65-45-12.

The restraining gland shall comply with all applicable dimensions of ANSI/AWWA C111/A21.11, C110/A21.10 and C153/121.53 and shall be compatible with all mechanical joint sockets of those standards, unless stated otherwise.

The EZ GRIP® mechanical joint restraint mechanism for PVC pipe shall be approved by Factory Mutual for sizes 4"-12" and listed by Underwriters Laboratories for sizes 4"-12". The restraint device for PVC Pipe shall be SIP Industries series EZP or equal.
