The EZ GRIP®

Pipe-To-Fitting Joint Restraint is a proven design, offering an efficient, reliable, and inexpensive method of restraining mechanical joint and push-on pipe fittings (4”-12”)** by utilizing a series of rigid machined gripping serrations that grabs, holds, and secures the PVC pipe to the fitting.

ADVANTAGES, BENEFITS, FEATURES

- The PTPDF Joint Restraint eliminates the need of timely thrust blocks.
- The PTPDF Joint Restraint performs optimally with AWWA C900 (PVC), C905 (PVC), C906 (HDPE), C909 (PVCO), or ASTM D2241 IPS PVC Pipe.
- Composed of high strength Ductile Iron in compliance with the ASTM A536 Standard, Grade 65-45-12.
- T-Bolts, Rods, and Hex nuts are manufactured from high-strength low-alloy (HSLA) steel as per ANSI/AWWA C111/A21.11.
- Machined to exact tolerances with a minimum safety factor of 2:1 **
- Easily maintains a working water pressure equal to that of the PVC pipe on which it is installed.
- The PTPDF Joint Restraint is designed and manufactured to be disassembled, reinstalled, and reusable.
- The PTPDF Joint Restraint can be installed on new or existing water systems.

**Harness pressure rating is reduced if not all connecting bolts/rods are used.

- The PTPDF Joint Restraint allows full joint deflection and maintains the seal while under pressure, and while subjected to ground movements.
- The internal serrations offer 360° circumferential contact with the pipe wall and increase the grip as the hydrostatic pressure increases while concurrently offering support of the pipe wall.
- With the split castings, the PTPDF Joint Restraint can conveniently be installed in or outside the trench.
- The PTPDF Joint Restraint for Ductile Iron Fittings is provided with a coating that is compatible with most field applied coatings. The standard color of the PTPDF Joint Restraint is red.
- Offered in sizes from 4” up to 42”

Installation Procedure: 4"-12"

1. Insert the spigot end of the pipe into the mechanical joint (MJ) bell. Next, insert one of the T-bolts through one of the bolt holes and mark a line approximately 1 inch from the far end of the bolt. For Push-On fittings, insert one of the long threaded rod through the top tab of the fitting and mark a line approximately 1 inch from the far end of the rod.

2. Assemble the MJ joint using the gasket, gland, and T-bolts to AWWA standards omitting the T-bolts corresponding to the ears on the restrainer. Assemble the restrainer on the pipe (as shown) so that the marked line on the pipe is even with the far side of the restrainer. Next, align the restraint holes by using one of the provided long T-bolts. Then, tighten restrainer clamping bolts to the recommended torque (see table below). For Push-on joint fittings, assemble the joint as per the manufacturers instructions. Assemble the restrainer on the pipe as described above. Align the restrainer so that the restraint holes line up with the tab on the push-on joint fitting.

3. Insert one of the long T-bolts and assemble one nut each between the gland and the restrainer (as shown). Repeat the same procedure for the remaining long T-bolts. T-bolts should be tightened as per AWWA standards. For Push-on joint fittings, insert the threaded rod through the restrainer ring and into the tab on the fitting. Thread one nut onto the fitting side of the assembly. Thread a nut onto the threaded rod against the far side of the retainer. Repeat the same procedure for the remaining threaded rods.

4. Snug tighten the remaining nuts behind the restrainer ears against the flat surface in a way that spigot end is secured into the MJ bell.

NOTE: Do not over-tighten the restrainer nuts, hand tight the nuts plus about one turn with a wrench.

---

Installation Procedure: 14"-42"

1. Insert the spigot end of the pipe into the mechanical joint (MJ) bell. Next, insert one of the long threaded rods through one of the open bolt holes and mark a line approximately 2 inches from the far end of the rod (towards the mechanical joint).

2. Assemble the MJ joint using the gasket, gland, and T-bolts to AWWA standards omitting the long threaded rods corresponding to the ears on the restrainer. Assemble the restrainer on the pipe (as shown) so that the marked line on the pipe is even with the far side of the restrainer and the flat side of the ears is facing away from the fitting. Next, align the restraint holes by using one of the provided restraining rods. Then, tighten restrainer clamping bolts to the recommended torque (see table below).

3. Assemble one nut behind the fitting bell, one nut against the gland. Repeat the same procedure for the remaining long threaded rods and tighten as per AWWA standards (this completes the MJ gasket assembly).

4. Assemble one nut with washer on the flat side of each restrainer ear (as shown) and tighten until snug.

NOTE: Do not over-tighten the restrainer nuts, hand tight the nuts plus about one turn with a wrench.

All dimensions in inches, unless stated otherwise.
The PVC pipe to ductile iron fittings restraining mechanism shall be designed and manufactured as two identical halves performing as a joint restraint. The PVC pipe to ductile iron fittings restraint shall be compatible with AWWA C900, C905, C906, C909 and ASTM D2241 PVC Pipe and shall contain a series of rigid integrally machined serrations that grip the outside wall of the PVC Pipe. The PVC pipe to ductile iron fitting harness shall have the same pressure rating as the pipe with a 2:1 safety factor. The grip of the serrations shall increase as the hydrostatic pressure increases.

There shall be no additional tools required for installation other than the tools required to install standard sizes of hex nuts from 5/8” - 1 1/4”. All hex heads, bolts and rods shall be designed to tighten clockwise. All hex heads, bolts and rods shall be manufactured to allow for disassembly and re-installation of the restraint.

The gland halves shall be manufactured of high strength ductile iron in accordance with the ASTM A536 Standard, Grade 65-45-12. Bolts, rods, and hex nuts shall be manufactured from high-strength low-alloy (HSLA) steel as per ANSI/AWWA C111/A21.11.

The restraining gland shall comply with all applicable dimensions of ANSI/AWWA C111/A21.11 and shall be compatible with all PVC pipe and mechanical joint fittings and push-on joint fittings (4”-12”) sockets of the standard

The restraint device for PVC Pipe to Ductile Iron Fitting shall be SIP Industries series PTPDF or equal.
